

The Ecological Gardens Difference

For centuries people have used plant knowledge to create productive landscapes. Ecological Gardens builds on this tradition by using knowledge from sustainable agriculture, ecology, and permaculture to design chemical-free landscapes that are biologically rich and ecologically sound.

From urban backyards to sixty-acre farms we design and install landscapes that build natural capital and meet the needs of humans as well as wildlife.

Our Commitment to You:

- 1) We are committed to increasing the beauty and abundance of the lands where we work by
 - a. Assessing the unique combination of resources – sun, water, wind, and microclimates – on the land and creating site-specific designs to make the landscape sustainable
 - b. Improving and building soils
 - c. Using the ecological functions of plants to solve landscape problems
 - d. Optimizing biological diversity
 - e. Matching plants to soils and microclimates
 - f. Designing sustainable plant communities that will be productive for today and many years to come.
- 2) We are committed to partnering with you to help you understand your land and increase its potential.
